**SCHWARTZ PREFILTER AND FILTER SLEEVES REBRANDED UNDER SANI-SLEEVE TRADEMARK
*Non-woven materials now certified 3A Sanitary Standards compatible.***

Schwartz Manufacturing Company, the premier manufacturer of the finest food filtration products worldwide, has released an expanded, full line of fabrics to accommodate in-line food processing, company officials announced today. To complement its expanded line of filtration media for in-line food processing, the firm has rebranded both its nonwoven Pre-Filter or F material (Tite Tuff) as well as its other filter sleeve fabrics under the brand name, Sani-Sleeve.

Sani-Sleeve product line meets all food processing filtration goals.

“We have expanded our line of food processing filtration media from the original offering of flannel, cotton, nylon and nonwoven media to include polyester and nylon in a larger variety of micron sizes,” said Alessandra Schwartz, CEO of Schwartz Manufacturing Company. “We now offer nine fabric options to meet your specific processing needs. In addition to our standard B, C, D, E and F media, we have released G, H, J and K materials to complete the product line. This will provide more filtration solutions for both our distributors and ultimately the end users.”

The Prefilter product has also been rebranded as part of the Sani-Sleeve product line, Schwartz said. It will share a package design similar to that of the other nonwoven media and will prominently feature the 3A Sanitary Standards compatible logo on its box.

“We continue to innovate in anticipation of customer needs,” Schwartz said, “and the introduction of these new fabrics really completes our product line and provides greater filtration options for the food processing industry.”

The Sani-Sleeve line of filtration products is available through the company’s distribution network. For further product information or to locate a distributor, visit schwartzmfg.com.
