Schwartz prefilter, filter sleeves rebranded to Sani-Sleeve; non-woven is certified 3-A

TWO RIVERS, Wis. — Schwartz Manufacturing Co., a worldwide manufacturer of food filtration solutions, recently released an expanded

line of fabrics to accommodate in-line food processing. To complement its expanded line of filtration media, the company has rebranded both its

non-woven prefilter or F material (Tite Tuffy) as well as its other filter sleeve fabrics under the Sani-Sleeve brand name.

All non-woven Tuffy and Tite Tuffy materials now are certified 3-A Sanitary Standards compatible. The prefilter has been rebranded as part of the Sani-Sleeve product line, Schwartz says. It will share a package design similar to that of the other non-woven media and will prominently feature the 3-A Sanitary Standards compatible logo on its box.

“We have expanded our line of food processing filtration media from the original offering of flannel, cotton, nylon and non-woven media to include polyester and nylon in a larger variety of micron sizes,” says Alessandra Schwartz, CEO, Schwartz Manufacturing. “We now offer nine fabric options to meet your specific processing needs. In addition to our standard B, C, D, E and F media, we have released G, H, J and K materials to complete the product line. This will provide more filtration solutions for both our distributors and ultimately the end users.”

“We continue to innovate in an-

icipation of customer needs, and the introduction of these new fabrics really completes our product line and provides greater filtration options for the food processing industry,” Schwartz adds.

A variety of sanitary, food grade woven and non-woven fabrics and styles are available with a range of micron ratings from 23 to 765. Schwartz says its filters are engineered for consistent performance and superior sediment retention, helping those in the dairy, food and beverage industries achieve their food processing goals.

Founded in 1919 by Sam Schwartz, Schwartz Manufacturing has served the dairy and food processing industries for more than 100 years and continues to develop and provide products that enhance efficiency and productivity for its customers. The company is currently owned and managed by Alessandra Schwartz, representing its fourth generation of continuous family leadership.

The Sani-Sleeve line of filtration products is available through the company’s distribution network. For more information or to locate a distributor, visit schwartzmfg.com. **CMN**
